

Equilibrium Constant

Lab Activity Calculations

I. Initial $[Fe^{3+}]$

a) Well D3 (standard)

$$[Fe^{3+}] = 0.200 \times \frac{5}{10} = 0.100 \text{ mol/L}$$

b) Well A1

Diagram for Well A1: A 10-drop well is divided into 6 drops of water and 4 drops of 0.200 mol/L Fe^{3+} . The 4 drops of Fe^{3+} are further diluted into a 10-drop well (Well C3).

Calculation: $0.200 \times \frac{4}{10} = 0.08 \text{ M}$

Well C3: $0.080 \text{ M} \times \frac{5}{10} = 0.040 \text{ mol/L}$

c) Well A2

Diagram for Well A2: A 10-drop well is divided into 6 drops of water and 4 drops of 0.080 M Fe^{3+} (from Well C3). The 4 drops of Fe^{3+} are further diluted into a 10-drop well (Well D4).

Calculation: $0.080 \text{ M} \times \frac{4}{10} = 0.032 \text{ M}$

Well D4: $0.032 \times \frac{5}{10} = 0.016 \text{ M}$

d)

Diagram for Well A3: A 10-drop well is divided into 6 drops of water and 4 drops of 0.016 M Fe^{3+} (from Well D4). The 4 drops of Fe^{3+} are further diluted into a 10-drop well (Well E3).

Well E3: $0.016 \times \frac{5}{10} = 0.008 \text{ M}$

Well A3: $0.008 \times \frac{4}{10} = 0.0032 \text{ M}$

e)

Diagram for Well A4: A 10-drop well is divided into 6 drops of water and 4 drops of 0.0032 M Fe^{3+} (from Well A3). The 4 drops of Fe^{3+} are further diluted into a 10-drop well (Well D2).

Well D2: $0.0032 \times \frac{5}{10} = 0.0016 \text{ mol/L}$

Well A4: $0.0016 \times \frac{4}{10} = 0.00064 \text{ mol/L}$

Calculations Continued

2. Initial $[\text{SCN}^-]$

$$0.200 \times \frac{5}{10} = \boxed{0.100 \text{ M}}$$

3. Find equilibrium $[\text{FeSCN}^{2+}]$

D3

Standard

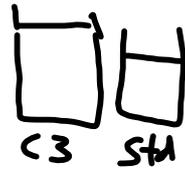

I.C.E. chart

	$\text{Fe}^{3+} + \text{SCN}^- \rightleftharpoons \text{FeSCN}^{2+}$		
I	0.100	0.001	0
C	-0.001	-0.001	0.001
E		0	0.001

assume SCN^-
is all used

4. Find $[FeSCN^{2+}]$ in wells.

$$\underline{C3} \quad [] = 0.001 \times \frac{8}{10} = 0.0008 \text{ M}$$

$$\underline{D4} \quad [] = 0.001 \times \frac{6}{10} = 0.0006 \text{ M}$$

$$\underline{E3} \quad = 0.001 \times \frac{5}{10} = 0.0005 \text{ M}$$

$$\underline{D2} \quad = 0.001 \times \frac{4}{10} = 0.0004 \text{ M}$$

4. Find all concentrations

Well C3

	Fe^{3+}	SCN^-	$FeSCN^{2+}$
I	0.040	0.0010	0
C	-0.0008	-0.0008	0.0008
E	0.0392	0.0002	0.0008

Well D4

Well E3

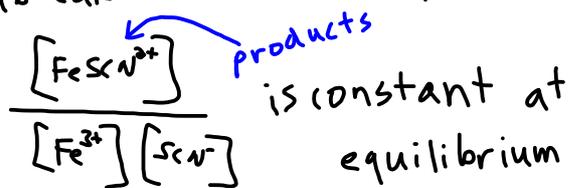

Well D2

Analysis Questions - Find a pattern using equilibrium

$$\frac{[FeSCN^{2+}]}{[Fe^{3+}] + [SCN^-]} \quad \frac{[Fe^{3+}][FeSCN^{2+}]}{[SCN^-]} \quad \frac{[FeSCN^{2+}]}{[Fe^{3+}][SCN^-]}$$

Mass Action Expression

reactants

Mass Action Expression

General-

Examples -

1. Write a mass action expression
for $\text{N}_2\text{O}_4(\text{g}) \rightleftharpoons 2\text{NO}_2(\text{g})$

$$K_{eq} = \frac{[\text{NO}_2]^2}{[\text{N}_2\text{O}_4]}$$

at equilibrium

2. $2\text{SO}_2(\text{g}) + \text{O}_2(\text{g}) \rightleftharpoons 2\text{SO}_3(\text{g})$

$$K_{eq} = \frac{[\text{SO}_3]^2}{[\text{SO}_2]^2 [\text{O}_2]}$$

For heterogeneous equilibrium
Substances in liquid or solid state
are not included in the expression.
